

## Adbruf unveils new Materials Development Centre

Having outgrown its original Research and Development facilities, Adbruf Ltd, the Dorset based highway line marking products, road safety materials and specialist resin based decorative paving systems manufacturer, has assigned significant investment to a brand new state-of-the-art Materials Development Centre adjacent to the company's manufacturing and administration premises in Stalbridge.

This is the first time that the company's R&D activities have been brought together as one; the intention being to maintain the development of existing products and to considerably expand research in to new systems to meet today's evolving markets. Previously, the company's R&D work had been constrained to various buildings on the same site, but the new facility enables research staff and testing equipment to be situated in one location.

The move will provide Adbruf with operational benefits but, more importantly, it will also allow improved and speedier R&D work and ultimately, enhanced materials for the company's customers. The benefits are already becoming evident with several new and innovative products nearing completion and launch.

The new Materials Development Centre was designed in house. The new building also houses new changing rooms, shower and locker facilities for Adbruf's factory workforce, together with a factory office, dining and rest areas.

## Anti-slip decking strips from Stoneflex URP

Anti-slip strips and step covers from Stoneflex URP have been used to cover the bridge of the Hidden Valley Park, this prestigious award winning park is located near Welshpool. Prestigious is the least we can say, continual improvements have brought with them a string of awards including 'The Best of the Best Parks in Britain' for the Millennium.

Philip Jones (owner of the park) said "It is safer for the residents to walk over the bridge, especially when the weather conditions are inclement. It has been a year since Anti-slip has been installed on top of the bridge and there's no doubt the product does the job".

Anti-slip strips from Stoneflex URP have been installed because of the excellent mechanical properties of the product ensuring a long lasting Anti-slip surface. "We as manufacturer's of Anti-slip are able to offer a British quality made product at a competitive price".

Anti-slip panels are available in a variety of different formats to suit your particular applications.

## British bollards protect American Embassy

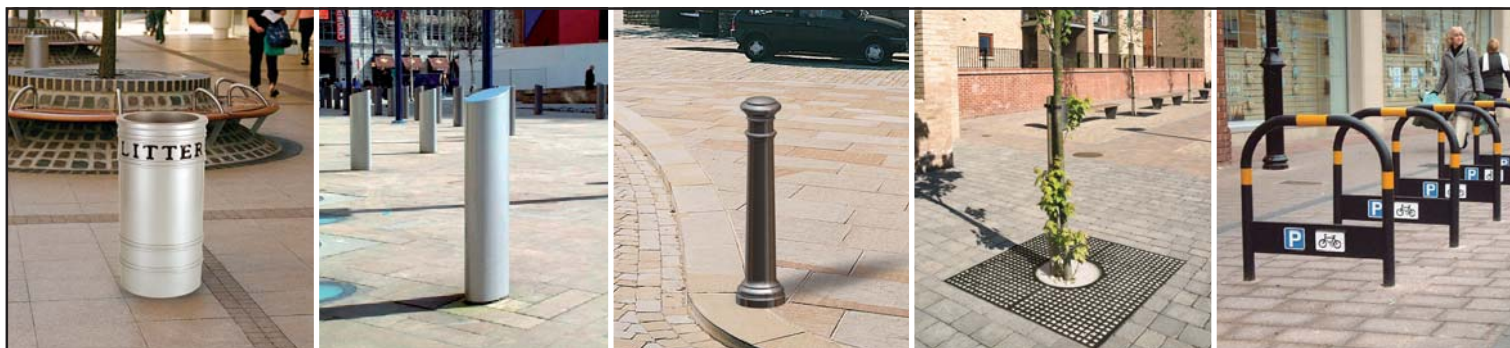

ATG Access SP1000 bollards now stand guard at the American Consular in Edinburgh.

ATG Access has installed over 250,000 bollards in the UK and abroad and its anti-terrorist SP1000 product is fast becoming the preferred method of secure access control for government facilities and other areas at risk of attack by vehicle borne explosives.

The American Embassy in Edinburgh follows several projects around the centre of London as well as a contract to protect the British Consular General in Istanbul and the installation of SP1000 anti terrorist bollards at the brand new Emirates Stadium in Islington.

The SP1000 has been tested to the forthcoming PAS68 standard which has been designed to match or exceed the American K12 L3 standard. One single SP1000 bollard was tested on three separate occasions, first at 30mph and then twice at 50mph, each time with a fully laden 7.5 tonne truck. Each test resulted in a dead stop of the vehicle and the bollard continuing to function.
