Case Study

Anti-Terrorist Perimeter Security

Location: Portsmouth Naval Base.

Brief: To create a secure perimeter to the entrance of the naval base.

Solution: Shallow Mount Static.

Bollards Installed before Re instatement:

The Royal Navy Base in Portsmouth is developing new areas to contain a training college and Military Police Station. The MOD needed a supplier and installer who had a proven track record delivering such projects. ATG Access was able to provide design, manufacture and installation that no other company could offer due to the unique level of depth available. The 112mm Shallow Mount Bollard that is impact tested to PAS 68 7.5t at 50 mph was utilised for the works.

Representatives from ATG visited site in Portsmouth on three occasions prior to getting the order. Once the order was placed ATG

Access did site specific drawings to position the Shallow Mount Bollards in the correct position.

ATG designed a layout which maximised available standoff from the building, while allowing pedestrian's the required access to tie in with DDA regulations.

ATG Access provided the complete solution from positioning of Shallow Mount Bollards to complete installation and re surfacing. The whole process was kept in house from sales to projects to installation.
