

ATG Access Ltd

Case Study

Anti-Terrorist Perimeter Security

Terrorist attacks in the UK are a real and serious threat. Crowded places, like shopping centres, are likely to feature in the attack plans of terrorist organisations in the future; as they are usually locations with limited protective securities measures and therefore afford the potential for mass fatalities and casualties.

ATG Access Ltd worked with the Main Contractors on site of one of the largest retail developments undertaken within Europe to offer solutions with shallow foundations, stand off protection & SP1000 automatic bollard system to control vehicular access to the White City Retail Development in London.

Shallow mount bollards were utilised in overcoming shallow foundation depths over the "Central Underground Line" whilst traditional SP1000 static bollards were placed where sufficient foundation depth could be achieved.

The SP1000 automatic system was integrated with the gate on the delivery entrance to provide a security line that is impenetrable by a 7.5 Tonne truck racing at 50MPH.

Providing the public with confidence in the safety of retail environments is critical to their continued success and ATG pride themselves on offering protection to the UK's most vulnerable and valuable sites and assets.

Once the order was received ATG Access created the design drawings, project managed the installation, undertaking the civil installation, electrical installation and commissioning of the system by our own engineers.

In order to carry out a successful and satisfactory installation of the project ATG had project management on site every week of the project.

Location: White City Shopping Centre
London.

Brief: To create standoff and create a high security vehicle access point for one of the largest shopping centres in Europe.

Solution: SP1000 Automatic, Fixed and Shallow Mount Bollards.
