

ATG Access Ltd

Case Study

Perimeter Security

Location: United Nations Head Quarter, Manama, Bahrain.

Brief: To increase the level of security for the main Entrance, in combination with Arm Barrier and Gate.

Solution: VP100 Automatic Hydraulic Bollard, Black model.

The United Nations Head Quarter in Bahrain was identified by our partner Secure Services, who required an upgrade in their perimeter security.

Representatives from ATG visited site in Bahrain on several occasions and were able to advise on ways of making the scheme aesthetically pleasing as well as secure. Meeting a representative of the manufacturer gave the end user confidence and provided evidence of the strong relationship with our partner Secure Services, Bahrain.

ATG designed a layout which maximised available standoff from the main entrance of the building, and incorporated three VP100 Automatic bollard systems which control vehicle access to the UN Head Quarters.

The bollards were fitted with black sleeves which provided a holistic style to the project.

Secure Services Bahrain, regularly participate in ATG training courses as well as attending International conferences in Abu Dhabi and they undertook all aspects of the project including design, civil works including street surface upgrading and commissioning.
