

ATG Access – The Bollard People

ATG Access Ltd is one of the world's largest manufacturers of access control and anti-terrorist vehicle barrier systems. We have a comprehensive product range of fixed, automatic and manually operated bollards.

ATG Access prides itself on being a solutions provider; we are an engineering company which manufactures bollards and bollard systems for a wide range of applications. The bollard marketplace has matured in recent times as companies such as ATG Access move into the bracket of "Specialist Suppliers" and clients expect more and more support and project management services.

We are in the enviable position of being able to offer you first class engineering back up and project management as well as the finest products around.

Our quality system is ISO 9001:2008 accredited, we are Construction Line and Safe Contractor certified, our products are UK Highways Agency approved and tested to Sold Secure standards; we are also part of the UK PAS68 and US ASTM & DOS testing programmes.

Our Products

Manual & Fixed

Our manual and fixed product family consists of our manually operated retractable security posts, our lift out perimeter hoops, our specialist pedestrian posts & retractacast bollards and the fixed or static equivalent of each of those products.

Automatic

Automatic rising bollards are fast becoming an everyday sight for millions of people around the world, the robust construction and reliable operation makes them the most effective way of managing traffic and protecting pedestrians.

High Security

Our high security rising bollards come with all the benefit of our experience at highways level but with the added proven and certified security of being part of the PAS 68 testing programme

Shallow Mount

The ATG Access shallow mount system is a revolutionary masterpiece of engineering and sits at the cutting edge of industry technology. Shallow Mount is not linked to any particular product, it is a structure we have developed that enables us to provide high security products which can be installed at a fraction of the depth underground that traditional products require. We can offer shallow mount bollards, barriers and gates which require as little as 112mm foundation depth and can stop 7500kg vehicles at 30, 40 and 50mph.

Shallow mount technology is the latest innovation in physical security and is proving invaluable within city centres, airports, skyscrapers and other places where underground services, car parks and basements prevent standard depth equipment to be installed.

Cityscape Gate The latest addition to our shallow mount products is a revolutionary swing gate which was designed from the top of the range SP1000 bollard.

Two shallow mounted SP1000 bollards are installed either side of the opening and a terrifically strong (yet surprisingly light) arm is installed and fixed into place across the two. This forms the world's strongest manually operated swinging gate, the structure was recently impact tested and stopped a 7.5 tonne truck travelling at 40 mph.
