

ATG Access Ltd

ATG Access Ltd. successfully completed a project in Germany to secure the **tallest building** in the country.

The different entities having their offices in the Messeturm, had a requirement for impact tested bollards but with a huge underground depth constraint.

132x PAS 68 tested SP1000 Shallow mount provides a high security solution around the building. The underground tube and site configuration required us to develop specific Shallow Mount shape.

The production Lead time asked by Messeturm was extremely tight and we manage to handover the project in due time. The Cobaco Civils Project Manager brought in considerable support by saucerising the job.

The collaboration between ATG Access Ltd, the local contractor and the architect in charge of the project was crucial. Its allowed all aspects of the project to be met and supplied by ATG and will undoubtedly lead to further work in the region through our local partner.

The prestigious Goldman Sachs bank is once again protected by our products and we have now several references for their main HQ in London and overseas for their sister companies.

Case Study

Anti-Terrorist Perimeter Security

Location: Messeturm Tower, Frankfurt Germany

Brief: To provide a high security vehicle barrier around the perimeter of the site

Solution: Shallow Mount K12 SP1000 bollards primed and painted in Grey with dome top.
