

ATG Access® is the UK's largest manufacturer of security bollards and vehicle systems, currently exporting to over 40 countries.

With over 22 years experience in the perimeter security industry, ATG Access® has a comprehensive product range of automatic and manually operated vehicle barrier systems including bollards, road blockers, specialised gates and barriers.

Bollards and barriers have become hugely popular due to the increasing requirement for safe, pedestrian friendly areas in town centres, ram-raid protection and aesthetically pleasing high security solutions.

With over 4,000 traffic management and high security installations worldwide, ATG Access® has a growing and comprehensive project list.

Innovative products and cutting edge engineering is ATG's passion and the company has become market leader in a variety of different technologies. This is a result of an extensive research and development programme which the company takes great pride in and leading manufacturing equipment such as our own panel shop allowing bespoke control systems to suit customer needs. ATG Access® was the first company to design and successfully test a high-security bollard at 50mph.

ATG Access® redefined the meaning of shallow with their ground breaking shallow mount technology, a double retractable system and the first rapidly deployed surface mount bollard system were also market leading innovations from ATG Access®.

ATG Access® has become a global brand offering a wide variety of access control products, installations, maintenance contracts and project management services. The company has manufacturing facilities in the UK, UAE, Singapore and the USA.

Complex construction projects need highly trained engineers and technically advanced solutions. ATG Access® is at the forefront of these solutions with a wide range of accreditations to certify their products and processes. ATG is also one of the founding members of the prestigious Perimeter Security Suppliers Association (PSSA).

ATG Access®; 'The Bollard People' manufacture, install and maintain a complete range of bollards and bollard systems.

Whether you are looking for a simple manual pull up post to secure a driveway, automated high performance access control for city centre applications or an intelligent, high-security bollard system for a government building, ATG has the product to suit your sites specific requirements.

Manual & Fixed Bollards

Our manual and fixed product family consists of our manually operated retractable security posts, lift-out perimeter hoops, our specialist pedestrian posts and retractacast bollards. Each of these products are available in a variety of colours and finishes. Different ranges are available to suit your project dependent on budget, aesthetics and operating mechanism. Manual posts can secure driveways, protect against ram-raid and vehicle theft and are a cost effective way of securing an area.

Automatic Rising Bollards

Automatic rising bollards are fast becoming an everyday sight for millions of people around the world. The robust construction and reliable operation makes them the most effective way of managing traffic and protecting pedestrians within a public area.

High Security & Anti-Terrorist Products

ATG Access® is proud to be involved globally in the ongoing vehicle barrier testing programmes which are recognised internationally (PAS 68 & 69/ASTM/DOS/TUV/CEN) and are continuously launching innovate high-security products proven to be the benchmark for the rest of the industry. ATG not only manufactures high-security bollards but has also designed a variety of specialist solutions such as the Cityscape Gate; the VBB Barrier and the Rapidly Deployable Surface Mount Bollards. ATG Access® were also innovators of super shallow bollard foundations; just 112mm, combating the problem of service disruption in city centre installations and providing a greener solution for your site.
