

ATG Access Ltd

Case Study

Automatic Rising Bollards

Location: Roundhay Converted Offices - Leeds

Brief: To manage the traffic to and from the site

Solution: ATG Access VP200 Automatic bollards

The ATG Access VP200 automatic bollards are built to the highest quality standards

This old warehouse area was converted into brand new open plan, state of the art offices and required an access control system for vehicles which matched its modern feel and yet maintained the aesthetic appearance of the surrounding area.

Two automatic rising bollards were installed to manage the traffic to and from site whilst a number of static bollards were installed to protect the perimeter and the integrity of the system.

The automatic bollards are controlled using proximity cards given to each member of staff or via an intercom system for deliveries and visitors.

As a final touch the loop controllers were installed underneath the newly installed block paving to maintain the aesthetic appearance of the roadway.
