

# ATG Access Ltd

## Case Study

### High Security / Anti-terrorist

**Location:** Corporate HQ, London

**Brief:** Secure the perimeter against vehicular attack

**Solution:** ATG Access SP400 rising and fixed bollards

New management identified the security outside the building as unsound and not aesthetically pleasing. A security audit and upgrade was carried out by ATG Access.

The ATG Access SP range of security bollards are built to the highest quality standards and conform to the toughest testing procedures in the World.

SP bollards are available as automatic, fixed or shallow mount and are constructed to withstand various levels of attack.

This building is now protected by 70 static bollards, 48 of which are shallow mounted into a foundation of just 112mm.

There are also 3 sets of dual automatic rising SP400 bollards allowing and controlling access to the site, two sets at the front of the building allowing access to VIP visitors and a set at the rear for service and deliveries.

Full project support was provided by ATG Access with layout design, foundation design, civil installation and complete project management being provided.
